

CHIEF COMPLAINT:

HISTORY OF PRESENT ILLNESS: This is a 3 year old female who started to have a fever up to 103 two days ago, continues to have fever, not eating and not drinking with mild sore throat. No rash. The patient' mother called my office and was given amoxicillin. She came to my office Today for examination where she was still having a fever of 102.5 and she was dry and a little bit weak and mildly lethargic. She was not taking enough fluids, no vomiting, normal bowel movements, no cough or stuffy nose, no ear hurting. We decided to admit the patient to Community Medical Center.

PAST MEDICAL HISTORY: Unremarkable.

ALLERGIES: None.

IMMUNIZATIONS: Up to date.

FAMILY HISTORY: None.

PHYSICAL EXAMINATION

VITAL SIGNS: Temperature 102.5.

HEENT: Throat has mild congestion, nose mild congestion. Ears are fine. Mucous membranes are dry, lips are dry, a little bit weak.

LUNGS: Clear.

HEART: S1 and S2 with no murmur.

abdomen soft mild tenderness

HISTORY AND PHYSICAL

HOSPITAL COURSE: A 3-year-old white male admitted to the hospital for fever for 2 days not eating or drinking, weak, dry, dysarthric. On the admission, there was no cough, no stuffy nose, no sore throat, had vomiting and weak and dry. IV fluid push given and then maintenance. Initial blood test, CO2 was 12. Second day, a repeat blood test, CO2 was 20 and the patient today doing fine. No fever, no cough, no stuffy nose. Skin, normal turgor. Lungs clear. Abdomen, soft. No tenderness. The patient started to eat and doing fine, active, alert, comfortable. So, we are sending the patient home today on no medication, to be followed in my office in 2 days.
on examination normal physical exam
