DISCHARGE NOTE

Date of Admission: 11/26/2011

Date of Discharge: 11/28/2011

Admission Diagnosis: Abscess labia majora

Discharge Diagnosis: same as above

Hospital Course: (include significant laboratory finding) see attached labs. Patient was admitted with a one-day history of erythema followed by swelling of her labia with increasing pain in tenderness. The patient was sent to Monmouth Medical Center and started on IV clindamycin. Yesterday, she had an incision and drainage of the abscess. Culture still pending. Today she is awake, alert, eating and walking around without pain. There is some edema and erythema but no induration and only minimal tenderness at the incision site.

Medications Received: See above.

Discharge Medications: Clindamycin 75 mg per teaspoon 7 mL 3 times a day x7 days.
Bacitracin 3 times a day x4 days to ~~room~~ *wound*.

Discharge Follow up: Private pediatrician in 2 days. Pediatric surgery in 4 days.
