EBV NUCLEAR AG (EBNA) IGG

(CONTINUED)

<0.91

Interpretation: Negative

Reference range: <0.91

Unit: Index Value

SEE NOTE

(Note)

Suggestive of a current Epstein-Barr Virus infection.

Test Performed at:
Quest Diagnostics
One Malcolm Avenue
Teterboro, NJ 07608
Janet Piscitelli, M.D.

EBV EA Antibody

<=0.90

Reference range: <=0.90

Unit: Index

(Note)

INTERPRETATION:

< OR =0.90	Negative
0.91-1.09	Equivocal
> or =1.10	Positive

A positive result indicates that the patient has IgG antibody to Epstein-Barr Virus Early antigen (EBV-EA). It does not differentiate between an active or past infection. The clinical diagnosis must be interpreted in conjunction with the clinical signs and symptoms of the patient.

This test was performed at:
Quest Diagnostics Nichols Institute Chantilly
14225 Newbrook Drive
Chantilly, VA 22021

Lyme Disease AB W/RFX (CONTINUED)

Lyme Disease AB W/RFX

Lyme Disease Screen H 1.35

Reference range: 0.00 to 0.90

Unit: Index Value

(Note)

Interpretation: Positive

Due to recommendations by the Food and Drug Administration (FDA), all positive or equivocal *Borrelia burgdorferi* antibody EIA (screening) tests will be followed by the Western blot. The screening test for *B. burgdorferi* has a low predictive value for a negative result when used to detect early infection and a low predictive value for a positive result when exposure history, symptoms, and clinical findings are not consistent with Lyme disease. Positive or equivocal results should not be interpreted as true positives until a second-step testing of the specimen is done using a method that is more specific for antibodies to *B. burgdorferi* (e.g. Western blot).

Test Performed at:
Quest Diagnostics
One Malcolm Avenue
Teterboro, NJ 07608
Janet Piscitelli, M.D.
