SOUTHERN OCEAN MEDICAL CENTER

1140 Route 72 West, Manahawkin, NJ 08050-2499 * (609) 597-6011

CONSULTATION REPORT

PATIENT NAME: SHARPE,KAYLA
UNIT NO: M000283834
DATE OF BIRTH: 02/10/2007
ADMISSION DATE:
ROOM #/BED: SPEECH
REPORT #: 1115-0177

DATE OF CONSULTATION: 11/07/11

CONSULTANT: KIMBERLY RULE MS

DICTATED BY: JENNIFER FREIWALD, SPEECH STUDENT

ATTENDING: MAHMOUD M YASSIN, MD

TYPE OF CONSULTATION: Speech and Hearing consultation.

REASON FOR CONSULTATION: Pediatric outpatient speech and language evaluation.

DIAGNOSIS: SPEECH DISTURBANCE **ICD-9 CODE:** 784.59

HISTORY: The patient is a 4 year 9 month old female, who was seen for an outpatient speech and language evaluation secondary to frequent phoneme distortions and substitutions. She was accompanied by her grandmother/legal guardian. Full history was limited. The patient currently communicates via verbal means with no reported consequences noted at this time. Family's stated goals for therapy is for the child to be understood by others.

BIRTH HISTORY: Birth history is remarkable for prematurity; The length of pregnancy was 31 weeks. Details regarding medical status at that time was not provided however the total hospital stay was 43 days. Birth weight was 2 pounds 15 ounces.

PAST MEDICAL HISTORY: Reportedly unremarkable. Child's overall health is reportedly good. Hearing acuity was formally assessed and deemed within functional limits as per caregiver report.

DEVELOPMENTAL HISTORY: Developmental milestones were reported age appropriate. Caregiver reports the following: The patient sat up alone at 5 months, walked at 10-1/2 months, toilet trained at 2 years, dressed self at 2 years, and first fed self at 1 year.

FEEDING HISTORY: All solid and liquid consistencies are reported tolerated without signs and symptoms of distress.

SPEECH/LANGUAGE HISTORY: According to the caregiver, the patient babbled at 7 months. Additional age range regarding speech milestones were not reported, however, family reports that the patient's language skills are adequate but she continues to present with articulation difficulties. The patient is reportedly understood by others 50% of the time and understood by family 85% of the time.

CONTINUATION OF CONSULTATION**PATIENT NAME:** SHARPE,KAYLA**UNIT NO:** M000283834**REPORT #:** 1115-0177**EVALUATION RESULTS:****Cognition/Behavior:**

The patient was observed quietly sitting in the waiting room. She separated easily from her grandmother. Attention appeared age appropriate. She was cooperative and able to participate throughout formal testing.

Voice:

Vocal quality was judged to be slightly nasal, yet within functional limits.

Articulation:

The Goldman-Fristoe Test of Articulation-2 was administered. The following scores were obtained:

Raw score- 41

Percentile Rank- 4

Age equivalent- less than 2.

Interpretation: Below age expectations

Errors at the word level consisted of:

Initial: D\K, D\SH, W\Z, D\S, B\V, W\L, D\CH, B\F, D\J, B/P

Medial: B\F, B\V, D\Z, omission\D, omission\CH, omission\TH (voiceless), D\J, W\L

Final: P\F, omission\S, omission\J, omission\TH (voiceless), omission\Z, omission\SH, W\SL, B\SP, omission\CH

Blends: K\TR, B\SP, omission\SW, BW\BL, W\SL, BW\BR, BW\FR, DW\KL, omission\KR, BW\GL, W\FL, DW\DR, B\GR, DW\KR, W\SL, D\ST.

Patient's overall intelligibility was judged to be fair to this trained listener in known contexts. Patient also used the phonological processes of: weak syllable deletion, gliding, final consonant deletion, stopping and fronting.

Language:

The PLS4 screening test was administered to determine the need for further assessment of receptive and expressive language skills. Patient obtained 4/5 correct. A score of 4 or more is considered a passing score, therefore no further assessment is warranted at this time.

SUMMARY: The patient is a 4 year 9 month old girl, who presents with a moderate speech disorder characterized by the use of multiple phonological processes, substitutions and omissions. These deficits result in poor socialization with peers and family. Due to the patient's age, potential for improvement is indicated and therapy is recommended to achieve long-term goal stated below.

RECOMMENDATIONS: Speech therapy one time per week for six months with goals below.

LONG TERM GOAL: The patient will produce speech that is judged to be intelligible 80% of the time to all listeners.

SHORT TERM GOAL:

1. The patient will produce final consonants in single words 80% of the time with visual cues.

CONTINUATION OF CONSULTATION

PATIENT NAME: SHARPE,KAYLA

UNIT NO: M000283834

REPORT #: 1115-0177

2. The patient will produce velars (K/G) 80% of the time in isolation with minimal verbal cues.

Thank you for this referral.
